

A combined solution for laboratory batches

A well-established European manufacturer highly specialized in the production of complete lines for the aseptic processing of injectable products. Steriline's portfolio include equipment, both mechanical and robotic, spanning from washing machines, depyrogenation tunnels, filling and capping machines to external decontamination machines and barrier systems such as LAF, cRABS and isolators.

Robotic filling and capping machine.

High-quality pharmaceutical glass vials.

Through its historical Ompi brand, Stevanato Group produces medical-grade ready-to-fill vials. SG EZ-fill® vials provide the highest customization level, quality, and safety, even for the most demanding drugs. The configuration in Nest&Tub maximizes filling efficiency, preserves the glass mechanical resistance, and drastically reduces particle generation. SG EZ-fill® vials are the perfect solution both for lab-scale batches, and industrial production.

ARaymond 
MORE THAN FASTENING

RayDyLyo® The new standard for vial capping.

RayDyLyo® is the new all-plastic push-fit cap for closing vials of injectable drugs. It eliminates the crimping and makes it possible to pre-assemble the stopper in the cap.

The RayDyLyo® range simplifies production processes and meets the need for flexibility of manufacturers of new molecules (cell therapies, biosimilars, oncology, monoclonal antibodies), from the development phase to mass production. It allows pharmaceutical companies to accelerate the time to market of new drugs.
