

HORTICULTURE FASTENING SOLUTIONS FOR GROWERS

ARAYMOND AGRICULTURE

Smart and Innovative solutions for growers.

*Fastening solutions designed
to decrease labour costs*

*Created for growers, our innovative solutions
for the Horticulture sector are designed
to increase overall production yield.*

*At ARaymond Agriculture,
we believe in working together
with growers in order to tailor our
services to best meet their needs.*

GREENHOUSE CLIPS

Avoid plant damage

Greenhouse clips help **provide a safer and more stable crop** for the grower by:

- Reducing weight pressure for heavy plants.
- Enabling better fruit production.
- Providing an easier and faster way to guide growing plants.

Decrease labor costs

ARaymond clips are designed to be the **fastest and easiest to place** clips on the market.

Their **innovative design** help growers decrease labor costs by **reducing installation time**.

ERGO CLIP 14,5mm

Launched in 2013, the Ergo Clip has become one of ARaymond's most popular and bestselling products, recognised for its quality and for its ability to reduce labor costs.

Designed specifically for the cucumber market, the innovative 14,5mm Ergo Clip fastening system is ideal for the production of delicate plants within a greenhouse setting as it reduces damage and maximizes plant growth.

A proven success with vegetable growers and distributors across the world, ARaymond recently decided to review the Ergo Clip to make the product even easier to use.

Enhanced ergonomic design

The new Ergo Clip was conceived by ARaymond's Innovation and Development department and features an enhanced ergonomic semi-closed design which will enable growers to install clips quickly and easily.

A value-added solution, the new Ergo Clip will also help producers reduce labor costs and maximise their yields by reducing installation time in the greenhouse as it can be clipped with just two fingers.

With a focus on quality and reducing installation time, the Ergo Clip's new design is optimized to ensure fast and safe clipping for the grower whilst meeting all the requirements of an ever-evolving production environment.

Optimum protection

Already one of the safest clips on the market, the new Ergo Clip comes with a brand-new closing system which is straightforward to fix and remove, thereby protecting young plants from damage during the installation and growth stages.

Designed specifically for use with delicate plants, the high-quality reinforcement offers optimum protection and emits an audible click once locked, making it easier to check positioning on the plant stem.

Fully versatile

Key features of the new Ergo Clip design are the redesigned hinge mechanism and the innovative new internal structure.

Fully reinforced, the new hinge improves twine retention and supports more weight than the original Ergo Clip while the new internal structure improves the closing system giving the clips more versatility when used with leaves or branches.

Every detail counts

Rigid and robust, air holes within the new Ergo Clip are set in a triangular structure for maximum light and air exposure to avoid fusarium and botrytis in the greenhouse.

These air holes also increase the clip's resistance and will ensure streamlined shipping to ARaymond's customers.

GREENHOUSE SUPPORTS

Plant health equals productivity

ARaymond's Innovation and Development department has developed two different truss supports in order to support tomato plants and improve field performance by increasing productivity.

- **Protection against breakages** caused by the excess weight of plants.
- **Maximum productivity** for each plant.
- **Easy and fast installation.**
- Eliminate weakness and damage whilst **reducing the risk of disease.**
- **One-size-fits-all design.**

GREENHOUSE HOOKS

Designed to be safe, flexible and easy to place

ARaymond's greenhouse hooks are designed to meet our grower's requirements:

- 'Anti jump" system.
- Reinforced structures to hold the plant's weight.
- Smooth twine release methods.
- Easy to place and remove.

Essential twine release

ARaymond offers different types of twine release to adapt to each grower's needs:

- ReelHook "push release" system.
- Free fall system available.
- Twine available in different sizes to meet grower's needs.
- Available in BIO and PP.

TESTIMONIAL REELHOOKS

“ReelHook offers excellent level of safety & ergonomics. Magí Pié”

Based in Bonastre in the Catalonia region of north-eastern Spain, Magí Pié the owner and director of Cal Magí has over 20 years' experience in hydroponic greenhouse cultivation.

Dedicated to the production of high-quality tomatoes and cucumbers for high-end restaurants and specialty shops throughout the region, Cal Magí specialises in growing a large variety of crops using natural methods of cultivation which are certified and controlled by the Catalan Council of Integrated Production.

Excellent levels of safety during the whole lifecycle

He states: “Here at Cal Magí, we grow a wide variety of crops including the larger Beefsteak, Raf and Montserrat tomatoes. Our plants are heavier than the crops traditionally grown in other countries so we need a stronger support system than that offered by the classic greenhouse hooks in order to avoid damaging or breaking our plants.

The ARaymond ReelHooks offer an excellent level of safety as the anti-fall twine release system prevents our crops from falling during the plant lifecycle. Its lock system also prevents the hook from jumping off the wire which is very important for us.”

Practical solution to decrease labor time and costs

Mr Pié also noted the increased practicality of the ARaymond ReelHook highlighting the ease of installation for his workers.

He added: "I find the ReelHooks to be a very functional solution for Cal Magí as **they are very simple to install and unwind**. The ergonomic design helps my workers to hold less weight and they are able to hang the hooks quickly and easily which in turn **decreases my labor time and costs**.

As a grower, my main concerns are to ensure optimum growing conditions for my crops and the ARaymond ReelHooks provide me with this added security."

ENVIRONMENT COMMITMENT

Environmental Commitment

ARaymond Agriculture is committed to developing innovative new products by investing in the research and development of materials which respect both terrestrial and marine ecosystems.

All ARaymond Agriculture products adhere to the very highest standards of quality in terms of material properties and production. Additionally, all ARaymond solutions can be recovered and reused during multiple production cycles.

At ARaymond Agriculture, we believe in the importance of developing sustainable agriculture as a response to all the critical environmental problems which the world is facing today. We believe that responsible agriculture and the development of sustainable and recyclable products are crucial for both the agricultural sector and society.

100% of our plastic solutions are made from recycled materials

In keeping with ARaymond Agriculture's environmental commitment strategy, all our plastic parts are made from recycled plastics of the very highest quality.

By reusing single-use plastic products to produce new fastening solutions, our aim is to preserve resources and energy whilst substantially reducing the amount of plastic waste damaging our ecosystem. The composition of these plastics together with optimal assembly line quality control ensures ARaymond solutions offer the very highest quality standards on the market today.

BIO certifications

ARaymond Agriculture holds NF EN13432 certification for our BIO solutions which guarantees that our BIO material and all BIO parts are fully biodegradable and compostable.

> *Validity of the certificate from 28 October 2022 till 04 October 2027*

Storage conditions for BIO material

- Store boxes in a cool dry place.
- Avoid direct exposure to sun or heat sources.
- Place in warm conditions for 24 hours before use.
